

Day 32 – Background Jobs & Async Processing (Celery + Redis)

Objective

To implement **asynchronous task execution**, essential for AI calls, emails, and heavy processing.

Tasks & Learning Scope

1. **Async Processing Concepts**
 - Why background jobs are needed
 - Difference between sync & async tasks
 2. **Celery Setup**
 - Install Celery
 - Configure Redis as broker
 - Connect Django with Celery
 3. **Task Queues**
 - Email sending task
 - Resume parsing task
 - AI call trigger task
 4. **Cron Jobs**
 - Periodic tasks
 - Scheduler configuration
-

Deliverables

Celery configured
Redis connected
Async task engine running

Learning Outcome

- Intern understands scalable backend execution
- Can offload heavy tasks properly
